NEW TANKER TO CUBA--The newly launched Soviel oil tanker Bucherest, 27,000 ton displacement, will depart for Cubs with a cargo of petrole improducts, according to a report to TASS from the Ministry of the Maritime Fleet. The oil tanker is the fifth in a series of large Poking type vessels built in the Baltic shippards of Leningrad. It has become traditional for the large Soviet oil tankers with a displacement of 27,000 to 35,000 tons to enter USSR-Cuban service immediately after launching. There are about 15 Soviet oil tankers reguarly plying between the ports of both nations. Besides petroleum, Soviet tankers also carry cargoes of ammonia used for the production of mineral fertilizers. (Text) (Havana Radio Rebelde Spanish 2300 GAT 23 August 1962--F)
